Compost

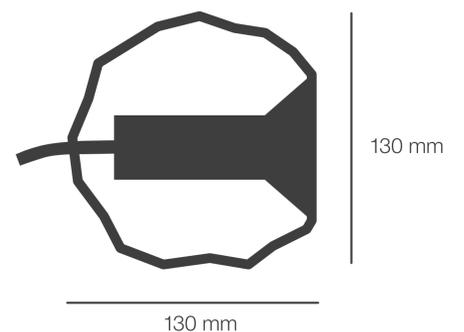

Cinder The rebirth of the nature.

The main idea is coming from its name cinder "The rebirth of nature". Life restoration of charred wood = the using waste in design.

The draft points out the using of beautiful structure of natural wood after a rough processing of it and also reusing of cremated material with thought "The black beauty".

Designed lamp of atypical shape serves as an ambient illumination in arbitrary scene. The light source are high-power and subsequently low energy LED lights. Lamp is possible to connect with the solar panel.

The material is made of ash of charred wood and natural bond. Molded composite is baked at the low temperature. Finally it is very hard, solid and in contact with water it is able to decompose. For using in exterior is necessary to use biodegradable lacquer. Material does not pollute environment, in the contrary it is very useful for composting and fertilization.

- wood - wood ash - flour
- charcoal liquid - LED light
